

# YOUR BUSINESS IS IN GOOD HANDS

Hydraulics lets you do more in less time. It allows tools to hit harder with less vibration and noise. Hydraulics is simply better.

The first time you see a hydraulic breaker you might think it's nothing special. It's compact, quiet and appears to vibrate less than electric and pneumatic tools. But there's more to it than meets the eye.

When you press the trigger you'll be in for a surprise. Hydraulic oil is a powerful energy transmitter. A nine horsepower power pack delivers the same power at the tool tip as a 20 horsepower diesel compressor engine.

In fact, for the price of one compressor and breaker you can buy two complete hydraulic power pack/ breaker packages. And hydraulics pays even when it's turned off. The energy efficient power packs are small enough to fit on a shelf or in a service van saving you fuel. Two people can carry the power pack with

If you already use hydraulic tools, you know what you get. If you're new to hydraulics, you and your business are in good hands.

# KNOW YOUR HYDRAULICS

Here are the essentials on why and when hydraulics is the best choice to get the work done on time and on budget.

With just one or two moving parts, there's minimal wear and very few parts to replace. These tools require very little service. Hydraulics work in a closed loop so dirt and moisture are kept out. And due to the no-spill, flat-face couplings, it's easy to keep the system clean. Hoses are fitted with high quality couplings, they comply with EHTMA (European Hydraulic Tool Manufactures'

Association) standards. That means easy, fast and safe connections even in applications with high concentrations of dust and dirt. Operators like hydraulic tools because they offer lower vibrations than many other tools available on the market. And since they don't emit any exhaust air, noise levels are kept down. Many times, you won't even need a power pack at all. Hydraulic

tools can be connected to a range of different power sources such as excavators, trucks, skid-steers and tractors. That means hydraulies is great for those quick one-day jobs: fencing, braking up paving for cables or piping.

#### HYDRAULIC GUIDE

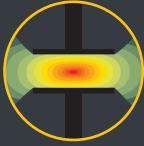

HOW

It's a closed loop system with minimal wear and very few parts to replace.

#### WHY

Hydraulic systems are practically maintenance free and has the best power to weight ratio of all power systems.

#### **WHAT**

Hydraulic oil can withstand extreme pressure and that makes it a powerful energy transmitter

#### **WHO**

Great if you are part of a construction firm, a rental firm and if you are a professional on the move who need lots of power for one tool at a time.

#### **WHERE**

Hydraulic tools are great on the road, in a mine, on a farm or a construction site. High power to weight ratio means the power pack fits in an ordinary service van.

#### **WHEN**

To handle every challenge fast with lots of power.

## THE P.O.W.R. OF HYDRAULICS

The P.O.W.R. of hydraulics lets you change tools with ease and run all available tools with the same power pack or excavator.

#### **PERFORMANCE - AT LOW COST**

Buy two complete hydraulic power pack/breaker packages for the price of one compressor and breaker. More power at less cost.

#### **OUTPUT - AT SMALL DIMENSIONS**

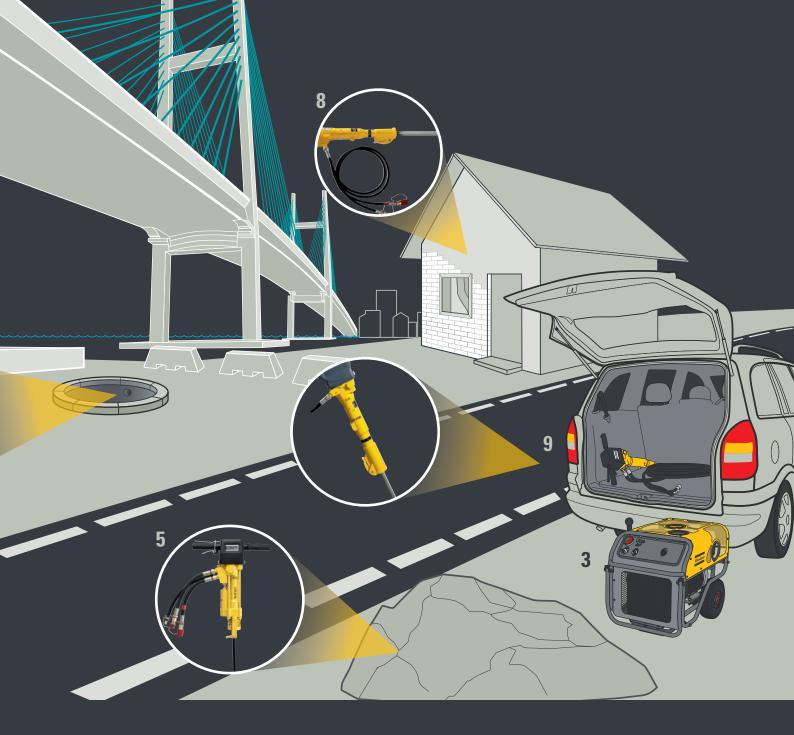

Take this example: A nine horse power hydraulic power pack delivers the same power at the tool tip as a 20 hp diesel compressor engine.

#### **WHEREVER - EASY ACCESS ON SITE**

The incredible power-to-weght ratio lets you carry around lot of power on your own. And the power packs are small enough to fit in a van.

#### **RELIABLE - MORE UPTIME**

With just one or two moving parts, there's minimal wear to hydraulic tools and very few parts to replace.

#### **APPLICATIONS**

#### 1. PUMPING FOR SAFETY

A hydraulic pump has few moving parts and can handle clean and contaminated water, mud, slurry and particles of up to 60 mm in diameter

#### 2. POST RAMMING BY REMOTE

Our hydraulic post rammer is nimble and can be fitted with a valve for remote action. It's great for both tall and short posts.

#### 3. POWER FOR ALL OCCASIONS

Working indoors? Or do you use diesel fuel for other machinery and would like to use it with your hydraulic tools as well? There is a power pack for all occasions.

#### 4. GO WITH THE FLOW

The LFD oil flow dividers are great for every tool that is connected to a source with more

flow than the tool is designed for. And they allow HBP-versions to be attached to an excavator or skid steer.

#### **5. ROCK DRILLING**

Hydraulic tools pack the best punch and vibrates less than other tools connected to other power sources. That means you can work longer and be more efficient.

#### 5. CUTTING

Cut concrete, asphalt and steel. Direct drive and simple machinery means high productivity and reduced maintenance.

#### 7. CORE DRILLING

Core drills are relied on to install drainage, sewer and water pipes, plus cable and ventilation ducts where large and deep holes are needed

#### 8. HORIZONTAL WORK

The LH11 pick hammer is ideal for horizontal work in brick, mortar and light concrete. Combined with an electric power pack it's an unbeatable indoor companion.

#### 9. BREAKING BETTER

Our breakers come in three versions: Standard, E and HBP. The E-versions reduce vibration by around 70 percent compared to a standard breaker. The HBP is especially made to accept higher back pressure in the return line. HBP breakers can be operated from almost any hydraulic outlet.

# BREAK ANYTHING ANYWHERE

We can help you handle any situation where a breaker or hammer is required. With the right tools you can break anything, anywhere.

**HAMMER** 

#### **HORIZONTAL SPECIALIST**

The LH11 is ideal for horizontal demolition of

brick, mortar and light concrete. It has a D-handle and a detachable front handle as option. The LH 11 is a great choice if you work in renovation, demolition and for structural alteration jobs.

LIGHT-WEIGHT

demolition jobs.

#### **LIGHT MULTI-PURPOSE**

Our LH 180 and LH 190 E are used to break brickwork, frozen soil, asphalt, concrete, as well as for tamping and compaction. The breakers are popular with contractors and rental firms for indoor and outdoor renovation and

MEDIUM WEIGHT

#### **MEDIUM MULTI-PURPOSE** The LH220/230 E are

among the best general purpose breakers available in the 23-28 kg range. They are commonly used with 5" asphalt chisels for road building and maintenance applications, but also work well in brickwork, frozen soil and concrete.

HEAVY-DUTY

#### **HEAVY MULTI-PURPOSE**

Breaking frozen soil, asphalt and reinforced

concrete takes heavy-duty breakers. The LH 270 and LH 280 E are considered among the best in their class.

WHEN THE GOING GETS **TOUGH** 

SUPER

HEAVY-

DUTY The LH 390 and LH 400 E are two of the most powerful handheld breakers in the world. They are used for demanding jobs in heavy asphalt, reinforced concrete and foundations.

All HBP breakers come with nipples that allows the breakers to be operated at different l.p.m than they are factory set to.

#### **Rock drill**

# HARD ROCK HARDER HYDRAULICS

Rocks are hard. Just like our rock drills.

This lightweight tool is designed for drilling blast, anchor and rock splitting holes. The LHD 23 M rock drill is used for example by contractors, armies and utilities who want convenient and efficient way to drill without a large compressor. With standard integral steel, it drills diameters of up to 50 mm and depths down to approximately six meters. The LHD 23 M uses hydraulic power for impact and rotation. A small additional compressor is needed for flushing.

#### When to use it

When you want convenient and efficient drilling without large compre<u>ssors.</u>

#### What you can do

The LHD 23 M drills down to six metres depth (20 ft) and up to 50 mm in diameter (2 in).

#### You're protected

The torque limiter prevents a kick-back when you're drilling.

#### ACTION 1: PERCUSSIVE IMPACT

Percussive drilling breaks the rock by hammering impacts transferred from the rock drill to the drill bit at the bottom of the hole.

#### ACTION 2: FEED FORCE

The purpose of the feed force is to keep the drill bit in close contact against the rock. The engineering challenge is to combine high feed force with good

# ACTION 3: ROTATION

Rotation moves the drill bit to a new position to make the next blow as effective as possible. When the drilling starts you need even and smooth rotation.

# ACTION 4: FLUSHING

Drill systems with a high output need good flushing technology to be able to remove dril cuttings. Particle size, shape and material affect the flushing methods.

#### **Better drilling**

A drifter version for separated operation of impact and two way rotation is available

### **Submersible pumps**

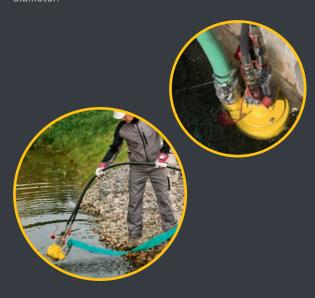

# HYDRAULICS MAKES PUMPING SAFER

Submersible pumps are machines that simply mustn't fail. That's why you should go hydraulic.

Submersible pumps are used in a wide range of applications. They are great at continuous pumping of clean or contaminated water on building sites. And they do marvels in flooded excavations and cellars. The pumps are driven by a built-in hydraulic motor featuring a special drive shaft, seal and bearings. Our pumps are cooled and lubricated by the hydraulic oil and can be left to run dry without damage. The performance is impressive considering their size and weight. They provide heads of 25 and 32 meters and output of 840 and 1,920 l/min.

The two inch submersible water pump can handle small stones and debris of up to 10 mm. It's an ideal all-round pump for municipalities, water and waste utilities and rescue services. It is also widely used in general construction and road services/maintenance work.

The three inch submersible trash pump can be used in similar applications. But the LTP3 can also handle more extreme contamination. It pumps mud and slurries containing stones and particles of up to 60 mm in diameter.

Pumps		LWP 2	LTP 3

#### **Cut-off saws**

# SIMPLE MEANS SHARP

Make a quick job of cutting concrete, asphalt and steel. It's simple.

Our hydraulic cut-off saws are simple in design – but don't be fooled. The direct drive and simple machinery means high productivity and reduced maintenance – especially in comparison with belt-driven saws. The compact, slim design and open cutting face give you a good overview of your work. With the help of a lightweight cart you can use the saws for floor, road and other light surface jobs. And thanks to hydraulics and direct drive the saws work perfect even under water.

## Simple and strong The LS 16 and LS 14

The LS 16 and LS 14 are simple in design. That means less maintenance and

#### Power to cut

The power-to-weight ratio is high and the direct drive makes the saw efficient.

16

#### Sight for safety

The cutting face is clearly visible while you are working.

#### What to cut

Put the saw to work on concrete, reinforced concrete, asphalt and steel. Use dry and wet diamond discs and abrasive steel cutting discs.

#### **Core drills**

## WHEN YOU NEED **CORE CONTROL**

Torque is good but you need control to be safe. Our hydraulic core drills are both safe and powerful.

Due to the hydraulic control of the drill torque, these core drills give very low kickback should drill bits jam. This helps you to maintain control, even when working on holes of 200 mm in diameter and above. Core drills are used by professionals in a wide range of applications including building renovation and utility works. They are relied on to install drainage, sewer and water pipes, plus cable and ventilation ducts where large and deep holes are needed. Core sampling in asphalt roads is another perfect application for this high performing drill.

The core drills offer spark-free operation – since there are no electrical components – and so can be used inside buildings and even underwater. With a standard round, 60 mm front-end, you can use Atlas Copco core drills with the majority of commonly available drill stands.

Safer with torque control Due to the non-kick back operation, you can drill holes of up to 200 mm (8 in) in diameter free hand.

#### **Easy transport**

core drills indoors and even

under water.

To make transport safe and easy, the core drill is delivered in a strong steel case.

#### **Post drivers**

## **DRIVE POSTS** BY REMOTE

The push-down trigger system is perfect for driving light fences, tent stakes and ground rods. A remote valve gives you extra reach.

The LPD-LD is the perfect all-round driver. It has an built-in anvil and a front end that allows for a quick mount of adaptors and bushings for small diameter rods. Special composite guiding bushings called PTFE protects the zinc or copper surface from the driving rod. The sliding surface of the composite material permits smooth, low-friction operation.

The LPD-T comes with a standard 0.5 meter quickrelease coupling tail hose. It has a build-in start/stop trigger that the you can activate directly on the driver.

The LPD-RV comes with a two meter long tail hose. It has a remote on/off valve, which allows you to activate the driver when it is placed on top of tall posts.

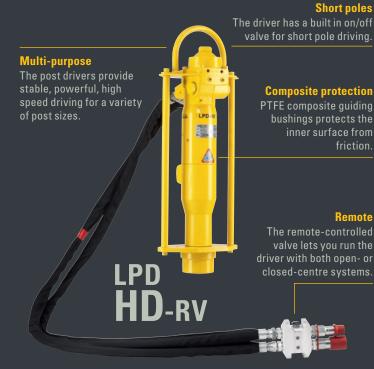

The post drivers accept a high back pressure in the return line, which allow you to operate from almost any hydraulic outlet – even on skid steers with high return pressure systems - or when extremely long hoses are needed.

Multi-hydraulic

The post drivers allow

you to operate from

almost any hydraulic

#### Great for ...

Drive in road barrier tubes, profiles, signposts, fences and a wide range of anchors and poles.

There are several adaptors for our hydraulic drivers.

1) Service weight will depend on size of adaptor. For further information, consult operating manuals. 2) With square adaptor, 54 mm 3) With anvil rod and head, 148 mm 4) Important: Full details of measurement is available in the Safety and Operating Instruction of the product (part no 3392 5036 01). It can be found on www.acprintshop.com

### Hole borer and puller

# BEAT THE HARDEST

When you are facing stones and hard soil this post hole borer is your friend.

Compact and powerful, this tool drills holes in hard soil and sand of up to 1.3 meter in depth and 90-350 mm in diameter. It offers reversible rotation and is designed for two-person operation. All augers have interchangeable bits for increased service lifetime. The auger is ideal for fencing and tree planting. It has two-way operation and adjustable torque settings. That means the LPHB can also be used for many other operations with special adaptors. You can for example use it for opening and closing main water line valves.

## GET A TEN TON GRIP

This is your best choice when removing hard-toreach crash barriers and road signs.

With hardened jaws and an automatic chain-tightening clamp, this post puller is ideal for removing all kinds of wooden or steel posts including IPE, HPE, UPE profiles and round/square steel tubes. This post puller develops six tons of hydraulic pulling force. With the help of a optional, separate hand lever you boost the pulling force by an extra four tons. Weighing in at just 60 kg, it is the most compact and portable pulling device on the market. It's perfect for on-site road repairs that cannot be accessed by heavy vehicles/excavators with a ten ton lifting capacity.

# **Quick change**Change the auger without tools.

The adjustable rotation speed and torque limiter means you can use the LPHB for many applications.

#### **Got power**

The total available pulling force is ten tonnes.

#### Get a grip

Remove any pole, steel beam or tube with diameter of up to 200 mm (8 in).

#### Reach anywhere

The main use is repairing barriers. Thanks to its low weight it's great for hard-to-reach areas.

# KEEP YOUR TOOLS RUNNING

Fuel for outdoor use and electric for indoor use. There is a power pack for every occasion and every need.

Our power packs are specialised to power applications in the range that require 20-40 lpm/170 bar. They're light and compact with well protecting frames. Two people can lift and carry the power packs with ease. And they're so small you can stack them on a shelf or in a minivan. The high power to weight ratio means you save both manpower and fuel

during transport. Foldable handles and big wheels also makes it easy to move the power pack around the work site.

Many of the power packs are equipped with Power On Demand (POD). This hydraulic regulatory system automatically idles the engine when the tool is not in use, and speeds it up when the tool is reactivated.

The thermostatically-controlled oil cooler allows quick warm-ups and helps protect the hydraulic oil from overheating. Correct working temperatures are achieved within minutes – even during the winter.

### **Power packs**

#### Quick tool change

The variable flow on/off valve allows for easy tool change and slow start-up.

#### Uptime is cool

Built-in hydraulic oil cooler extends component lifetime and increases reliability in tough, hot conditions.

#### Just go!

One person can easily move the power pack to the foldable handle and the large wheels.

#### Easy to read

All power packs feature a large, easyto-read filter gauge that indicates when it's time to change the filter.

#### Easy oil check

To facilitate control and refills of hydraulic oil, the sight glass and filler cap are placed together.

#### **Designed for speed**

The easy controls, clear instructions and a logical layout of the front panel makes work quicker and safer.

#### Fire without smoke

Go for an electric power pack when you want to skip exhaust fumes and emissions.

Quality pays off. Thats why we use Lombardini, B&S Vanguard and Honda engines.

Uptime is in the details

#### **Light lifting**

You can easily move the power pack with the help of a friend. And it fits in a service van.

**Serve and protect** 

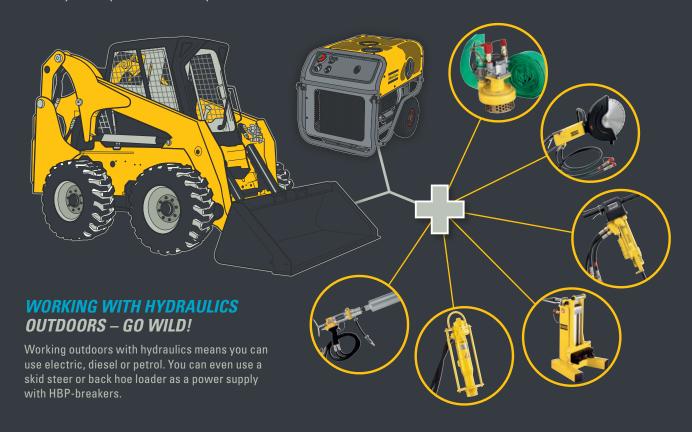

panels protect all vital

are easily accessible.

# NEED FOR SPEED AND POWER

If you need lots of power and the ability to change tools quickly, hydraulics is for you. Hydraulics lets you work both indoors and outdoors.

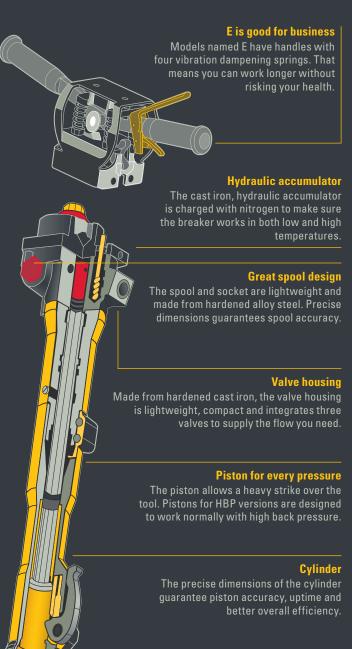

#### WORKING WITH HYDRAULICS INDOORS – GO ELECTRIC

When you want to work without exhaust fumes an electric power pack is your ideal workmate. It's great for indoor work, tunneling and other on-site jobs that require a clean working environment.

- Runs any EHTMA tools that require 20 l/m
- Low weight: 5,5 kW 3x400 v/16 amp industrial motor
- Total weight: 68 kg
- Built-in thermo relay
- CE connector with phase switch for correct pump rotation
- Large filter gauges, thermostatic filter control and filter by-pass
- On/off lever for quick tool change
- Foldable handle with cross bar
- Fully protected motor
- Easy to remove hydraulic parts

# HYDRAULIC BREAKER GUIDE

Hydraulic breakers offer the best power to weight ratio available. Here's how they work.

#### **Accessories**

High back pressure breakers (HBP) require an oil flow divider: OFD 20 or OFD 30. An extension hose gives extra working width.

#### THIS IS HBP

#### **HIGH BACK PRESSURE-ENABLED BREAKERS**

The HBP-breakers are made to handle high back pressure. It's great for instance when working with a skid steer as a power source or if you are working with particularly long hoses. An ordinary breaker will lose power in those circumstances. It can even be damaged. High back pressure occurs when hydraulic flow in a return line is restricted. It causes a build up of pressure backwards through the line. The pump has to produce more power to overcome the back pressure, which in turn reduces flow in the system.

# BREAKING PAVEMENTS THE RIGHT WAY

Asphalt is a flexible wearing course. A reinforced concrete course is rigid and can handle heavier loads than asphalt. That means you should use different breakers for different pavements.

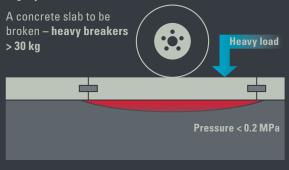

# ASPHALT – USE MEDIUM BREAKERS Flexible pavement

A part of the asphalt to be removed – medium breakers 25-30 kg

Heavy load

Pressure 2.0 MPa

# REINFORCED CONCRETE – USE HEAVY BREAKERS Rigid pavement
